

AI Prompt Library

40 production-ready prompts for Sales, Marketing, Operations & Reporting — built to run your business OS.

Copy any prompt into Claude, ChatGPT, or an n8n AI node. Replace the `{bracketed}` placeholders with your details, or feed them from a Notion field. Each prompt names the job it does and where it fits in the lifecycle.

How these connect to the system. The same pattern behind the live lead-scoring demo — "give the model context, ask for structured output" — powers every prompt here. Where a prompt says "return JSON," it's ready to drop into an automation that writes straight to Notion.

● Sales

1 · Lead Qualifier (scoring)

You are a B2B sales qualification assistant. Score this inbound lead.
Lead: name {name}, company {company}, business type {biztype}, stated bottleneck: "{bottleneck}".
Return ONLY JSON: { "lead_score": 1-10, "priority": Urgent|High|Medium|Low, "industry": "", "buying_intent": High|Medium|Low, "opportunity_low": USD, "opportunity_high": USD, "executive_summary": "2-3 sentences", "next_action": "one step" }.

Use for: auto-scoring website leads into the CRM (this is the live demo).

2 · Discovery Call Prep

Prepare me for a discovery call with {company} ({industry}). Based on their stated need "{challenge}", give: (a) 3 things to research first, (b) 8 discovery questions ordered from rapport to pain to budget, (c) 2 likely objections and how to reframe them, (d) a one-line value hypothesis.

Use for: turning a New Lead into a confident first call.

3 · Proposal Drafter

Draft a concise proposal for {company}. Context: their goal is {goal}, scope is {scope}, timeline {timeline}, budget range {range}. Include: problem summary, proposed approach (3-4

phases), deliverables, timeline, pricing options (good/better/best), and a clear next step. Keep it under one page, plain language.

Use for: moving a deal from Discovery to Proposal stage.

4 • Objection Handler

A prospect said: "{objection}". Give me 3 honest, non-pushy responses – one that empathizes, one that reframes with evidence, and one that proposes a small next step. Avoid clichés and pressure tactics.

Use for: real-time negotiation support.

5 • Follow-up Sequence Writer

Write a 4-email follow-up sequence for {company} after our {meeting type}. Tone: warm, brief, helpful. Email 1 (recap + next step, same day), Email 2 (value-add resource, +3 days), Email 3 (case study angle, +7 days), Email 4 (graceful breakup, +14 days). Each under 120 words with a subject line.

Use for: never dropping a follow-up again (the Walk→Jog catalyst).

6 • Pipeline Triage

Here are my open deals: {paste deal name, stage, value, close date, last touch}. Rank them by where I should spend time this week. For each, give a one-line reason and the single best next action. Flag any that are stalling.

Use for: a focused Monday from your Sales Pipeline.

7 • Cold Outreach Personalizer

Write a 90-word cold email to {name}, {role} at {company}. Reference {specific trigger/observation}. Lead with their world, not mine. One clear, low-friction ask. No buzzwords, no "I hope this finds you well."

Use for: referral and event follow-up that doesn't sound templated.

8 • Win/Loss Analyzer

We {won|lost} the {company} deal. Notes: {what happened}. Analyze: what actually drove the outcome, what we'd repeat, what we'd change, and one process improvement. Be candid, not flattering.

Use for: turning closed deals into a sharper playbook.

9 • Quote / Pricing Builder

Build a clear quote for {scope}. Inputs: line items {items}, my rate {rate}, estimated effort {hours}. Output a clean itemized quote with subtotals, an optional retainer alternative, and a short note on what's included vs. out of scope.

Use for: fast, consistent quotes you can paste into a deal.

10 • Call Notes → CRM Summary

Summarize these raw call notes into a CRM-ready update. Notes: "{paste}". Return JSON: { "summary": "3 sentences", "next_action": "", "priority": Urgent|High|Medium|Low, "follow_up_date": "YYYY-MM-DD" }.

Use for: auto-logging meetings into the CRM via automation.

● Marketing

11 • Ideal Customer Profile

Build an ICP for my business: {what you sell, to whom}. Define firmographics, the buyer's role + goals, their top 3 pains, where they hang out, and the trigger events that make them ready to buy. End with 3 disqualifiers.

Use for: pointing all marketing at the right person.

12 • Landing Page Copy

Write landing-page copy for {offer}. Audience: {ICP}. Provide: a hero headline + subhead, 3 benefit blocks (benefit, not feature), a short "what's inside" list, one objection-busting line, and a CTA. Confident, concrete, no hype.

Use for: a resource page or lead magnet (like this kit's site).

13 • Newsletter Writer

Write a 250-word email newsletter on {topic} for {audience}. Open with a specific hook, deliver one genuinely useful idea, and close with a soft CTA to {action}. Subject line + preview text included.

Use for: staying top-of-mind without sounding salesy.

14 • Content Repurposer

Turn this long piece into: 3 LinkedIn posts (each a different angle), 1 short-form video script (45 sec), and 5 one-line takeaways. Keep my voice. Source: "{paste}".

Use for: one idea → a week of content.

15 • SEO Blog Outline

Create an SEO outline for the keyword "{keyword}". Include: search intent, a working title + 2 alternates, H2/H3 structure, questions to answer (People-Also-Ask style), and a suggested CTA. Note where to add examples.

Use for: blog posts that actually rank and convert.

16 • Ad Copy Variations

Write 5 ad variations for {offer} on {platform}. Vary the angle: pain, outcome, social proof, curiosity, and urgency. Each within platform limits, with a headline + primary text + CTA.

Use for: paid tests without writer's block.

17 • Case Study from a Project

Write a one-page case study from these project facts: client {client}, problem {problem}, what we did {work}, results {metrics}. Structure: Challenge → Approach → Results → Quote (draft a realistic client quote to confirm). Keep it credible, not braggy.

Use for: turning a completed (offboarded) project into proof.

18 • Lead Magnet Ideation

Suggest 8 lead-magnet ideas for {ICP} that solve a slice of {core problem} in under 15 minutes. For each: format, title, and the one promise it makes. Rank by effort-to-value.

Use for: filling the top of your funnel.

19 • Subject Line Lab

Generate 10 subject lines for an email about {topic}, audience {audience}. Mix curiosity, benefit, and specificity. Mark the 2 you'd A/B test first and why.

Use for: lifting open rates on any campaign.

20 • Brand Voice Guide

From these writing samples, infer my brand voice and write a 1-page guide: tone adjectives, do/don't list, sentence rhythm, vocabulary to use and avoid, and 3 rewritten example lines. Samples: "{paste}".

Use for: keeping every AI output sounding like you.

● Operations

21 • SOP Writer

Turn this messy process into a clean SOP: "{describe what you do}". Output: purpose, when to run it, step-by-step (numbered, each step an action), tools used, common mistakes, and a definition of "done". Write it so a new hire could follow it.

Use for: populating the SOP Library — the foundation of "Run".

22 • Onboarding Plan Generator

Create a client onboarding plan for a {project type} engagement. Include: a kickoff agenda, the first 5 tasks with owners and due-day offsets, what to collect from the client, and the welcome-email key points. Output the tasks as JSON for automation.

Use for: standardizing what the onboarding workflow creates.

23 • Automation Designer

I want to automate: "{describe the process}". Design it as a workflow: trigger, each step (node) with its job, the data passed between steps, and where a human should stay in the loop. Flag anything that needs a credential or could fail silently.

Use for: planning your next n8n build before you open n8n.

24 • Meeting Agenda + Actions

Draft a 30-minute agenda for a meeting about {topic} with {attendees}. Goal: {outcome}. Include time boxes and the decisions we must leave with. After, I'll paste notes – convert them into action items with owners and dates.

Use for: meetings that end in tasks, not vibes.

25 • Tool / Vendor Evaluation

Help me choose between {options} for {job to be done}. Build a comparison on the criteria that matter to me: {criteria}. Give a recommendation with the trade-off in one sentence, and the smallest test to de-risk the choice.

Use for: picking complementary tooling (see the Tooling Guide).

26 • Offboarding Checklist

Create a client offboarding checklist for a {project type} that just wrapped. Cover: final deliverables, knowledge transfer, access revocation, invoicing, testimonial request, and asset archival. Output as tasks with suggested due-day offsets.

Use for: closing the loop cleanly (the offboarding workflow).

27 • Inbox Triage & Draft

Here's an email I received: "{paste}". Classify it (lead, client, vendor, noise), tell me the priority, and draft a reply in my voice that moves it forward in under 90 words. If it needs info I don't have, list what to ask.

Use for: an AI-assisted inbox that drafts, you approve.

28 • Capacity & Workload Planner

Given my active projects and their due dates {paste}, and my capacity of {hours/week}, tell me what's realistic this week, what's at risk, and what to push or delegate. Be honest about overcommitment.

Use for: keeping Project Health honest.

29 • Incident / Postmortem

Something broke: "{what happened}". Write a blameless postmortem: timeline, root cause, impact, what we did, and 3 guardrails to prevent silent recurrence (alerting, checks, fallbacks). Calm and specific.

Use for: the "Fly" discipline — no silent failures.

30 • Template / Policy Drafter

Draft a reusable {document type} (e.g., scope agreement, refund policy, kickoff questionnaire) for a {business type}. Plain language, fair to both sides, with {placeholders} where I personalize. Flag anything I should have a professional review.

Use for: building your template library once, reusing forever.

● Reporting

31 • Weekly Business Summary

Summarize my week from this data – new leads {n}, deals moved {list}, projects shipped {list}, tasks done {n}, revenue {amount}. Write a 150-word update for myself: wins, what slipped, and the one thing to focus on next week.

Use for: an automated Monday briefing from Notion data.

32 • Pipeline Forecast Narrative

Given these deals {name, value, stage, probability, close date}, write a forecast: expected close this month (weighted), best/worst case, the 2 deals that swing the number, and the risk to watch. End with a number I can say out loud.

Use for: a forecast you can defend, not just a spreadsheet.

33 • KPI Dashboard Definition

For a {business type}, define the 6-8 KPIs I should track across sales, delivery, and finance. For each: what it measures, how to calculate it, a healthy range, and the data source. Keep it to what actually drives decisions.

Use for: deciding what to measure before you build reports.

34 • Client Status Update

Write a friendly status update to {client} for project {name}. Inputs: done this period {list}, in progress {list}, blockers {list}, next milestone {date}. Reassuring, specific, under 150 words, with one clear ask if needed.

Use for: proactive client comms that prevent churn.

35 • Monthly Metrics Commentary

Here are this month's numbers vs last {paste table}. Write the commentary a good operator would: what moved, why (hypotheses), what's noise, and 2 actions. Don't just restate the numbers – interpret them.

Use for: turning a metrics table into a decision.

36 • Data → Insights

Analyze this table and surface the 3 most important, non-obvious insights, each with the evidence and a recommended action. Call out any data-quality caveats. Data: "{paste CSV/table}".

Use for: fast analysis of any export.

37 • Executive One-Pager

Condense this into a one-page executive brief: situation, key numbers, decision needed, options with trade-offs, and your recommendation. Lead with the recommendation. Source: "{paste}".

Use for: getting a decision from a busy stakeholder.

38 • Churn / Risk Analysis

From these client signals {usage, sentiment, payment, last contact}, flag who's at risk of churning, why, and the save play for each. Rank by revenue at risk. Be specific about the warning sign.

Use for: protecting revenue before it walks.

39 • Goal / OKR Tracker

Help me set quarterly OKRs for {area}. Given my goal "{goal}", propose 1 objective and 3 measurable key results, a baseline and target for each, and the weekly leading indicator to watch. Ambitious but real.

Use for: connecting daily work to the quarter's target.

40 • Automation Health Report

I run these automations {list with what each does}. Design a weekly health report: what to check (success rate, failures, items processed), how I'd know about a silent failure, and the 3 guardrails worth adding. Output a checklist I can automate.

Use for: the reporting + guardrails layer that gets you to "Fly".
